

Editing with your iBook

Any student/faculty with a iBook has full capability of capturing and editing video using a firewire cable, mini DV camcorder, & imovie software which is already installed.

The 6-pin firewire port is located on the left side of your iBook.

Using a 6-pin to 4-pin FireWire cable and a Mini DV camera (or the VCR/Media Converter at Station 10 located in Media Services) you can open iMovie and import your footage for editing.

For instructions on how to use iMovie, go to <http://www.apple.com/support/imovie/>

It is strongly suggested that you use one of the Mac editing computers in the Media Center to make movies that will be over 5 minutes long.
