

**Gougeon Brothers, Inc.**  
**Bay City, MI**

**JOB DESCRIPTION: Composite Materials Engineer**

The basic function of the Composite Materials Engineer is to support advanced users and Regional Sales Managers with required materials testing or specific material engineering information. The Composite Materials Engineer is also required to address customer technical inquiries pertaining to Gougeon Brothers Inc. products and to maintain a working knowledge of similar products and applications in the market place.

**SPECIFIC RESPONSIBILITIES**

Support Marketing initiatives including but not limited to attending trade shows, visiting customers, and giving technical lectures with particular effort to PRO SET Distributors and users.

Design and execute materials testing programs for customers. "

Author company testing reports and product datasheets, including internal spreadsheets and calculation tools

Perform work on new product development and customer service projects as assigned by Technical Director or Technical Services Coordinator

Write technical articles for company publications and websites.

Answer technical questions from customers and record appropriate information.

Prepare and test samples, materials and processes for new product development and customer service.

Evaluate performance and create specifications for process equipment.

Maintain awareness of competitive products and industry trends.

**GENERAL RESPONSIBILITIES**

Continually learn more about the product and those application techniques, methods and processes that meet the needs of prospective end-users.

Strive to maintain conversance with the product's physical properties, chemical composition, and manufacturing considerations, difficulties and costs.

Maintain a close working relationship with all company departments and their members. Demonstrate and promote the concept and advantages of being internally cooperative while externally competitive.

Actively support all Company policies, with special attention to safety, health, personal bias and abhorrent conduct issues.

Participate and fully support the Quality System and any other activities necessary to support the management and effective functioning of the company.

Attend and participate in all Company-wide meetings, lectures and annual social events.

**QUALIFICATIONS**

A Bachelor's Degree from an accredited college or university, preferably in composites or materials science or a related engineering discipline.

The ability to work with composite materials and processes in a fabrication shop environment for R&D purposes.

A record of success reflecting consistent improvement, completion of assignments and obtainment of goals.

The ability to work with others, to be convincing and yet hold ideas and conclusions generously.

The skills and knowledge to keep all lines of communication open within the Technical Department and throughout the company.
