Employment/Internship opportunity

We at Designs by Natural Processes, Inc. have two positions available after new funding on a project to recycle waste ashes. Additional funded projects include reducing CO_2 emissions in cement production, and we're expecting a grant for incorporating recycled plastics in asphalt as well. The job provides opportunities to work with your hands, work on projects with a large amount of independence, learn about the research process, and work with a variety of different materials. Other projects include self-repairing polymers, artificial photosynthesis, and self-repairing concrete. Most successful employees receive multiple job offers upon graduation.

Research assistant pay is $13.00 - $15.00 an hour

Preferred candidates will be a sophomore or junior, have high grades, high ACT score and a desire to excel in new endeavors
